

APP SPECIALIST INTERN

» INTERNSHIP HIRING

As an Application Specialist Intern, you will support business software applications and gain hands-on experience in system configuration, application support, and solution delivery. This role provides exposure to enterprise systems, business operations, and low-code development tools while working closely with consultants and project teams in a real client environment.

BENEFITS

- Competitive allowance and benefits package
- Opportunity to learn from experienced consultants in their respective fields
- Hands-on exposure to enterprise applications and business systems
- Real-world experience supporting business operations and users
- Opportunity to work on client projects and business application solutions
- Exposure to various technologies and business application platforms

QUALIFICATIONS

- Advantage if having experience, knowledge, or certification in business-related subjects or business application software
- Good knowledge of IT environments, software development, data analytics, or business operations; any coding language is accepted
- Willingness to learn low-code development tools with a process-oriented mindset
- Bachelor's degree in Computer Science, Information Technology, or related fields
- Experience using reporting tools or programming languages such as R, Python, Java, Power BI, or similar, with strong proficiency in at least two
- Knowledge on machine learning frameworks such as scikit-learn or TensorFlow.
- A passion for learning and working in a data-driven environment.
- **This role requires a mandatory minimum commitment of six (6) months. Applications from candidates who are unable or unwilling to fulfil this requirement will not be considered.**
